Wall Units

STANDARD

system

Standard - a narrow and slender profile, with a groove, forming a delicate door frame. Doors made with the use of this profile are light and slender, which gives sublime character to the construction. Thanks to its delicate line, the Standard profile emphasizes the material that is inserted in the front. Wardrobes designed using this profile are perfect for narrow hallways, in the attic and in children's rooms in both classic and contemporary styles.

The Standard system enables the production of sliding and hinged doors, as well as the use of decorative strips to match the colour of the system.

PARAMETERS

- max door height: 2.75 m
- max door width: 1.25 m

PROPERTIES

- anti-jumping function protects the door against falling out of the bottom track
- buffer strips with short and long hair reduce vibrations when closing the door and protect the interior against dust
- rollers equipped with bearings ensure light door sliding with ease
- quiet work of the running gear
- possibility of using the door closers ensuring soft closing of the door

LUX system

Lux - a system with wide edges and a regular, classic shape. The smooth surface and a light indent in the central part of the profile make it extremely comfortable to use, serves as a handle. The regular shape of the frame gives a gentleness to the wardrobe and thus the whole interior. Due to its appearance, Lux is widely used in interiors of various styles, from classic through retro, vintage, eclectic to rustic.

The Lux system enables the production of sliding, pivoting and slant doors and the combination of various insert materials within one door. It is also possible to use decorative strips in the colour of the system.

PARAMETERS

- max door height: 2.75 m
- max door width: 1.25 m

PROPERTIES

- anti-jumping function protects the door against falling out of the bottom track
- buffer strips with short and long hair reduce vibrations when closing the door and protect the interior against dust

MAGNETYT system

Magnetyt – interesting, harmonious shape that's structure is architecturally pleasing. The slim lime, delicate roundness at the edge of the frame and its perfect composition makes Magnetyt an aristocrat among profiles of a similar character. It is a profile that stands out against the background of the door insert material, forming its visible frame. Magnetyt makes wardrobes look elegant and classy, and at the same time modern and fresh. It goes perfectly with the classic, retro, vintage, industrial, Scandinavian, eclectic and contemporary styles.

The Magnetyt system allows for the production of sliding doors and the combination of various insert materials within one door. It is also possible to use decorative strips in the colour of the system

PARAMETERS

- max door height: 2.75 m
- max door width: 1.25 m

- anti-jumping function protects the door against falling out of the bottom track
- buffer strips with short and long hair reduce vibrations when closing the door and protect the interior against dust
- rollers equipped with bearings ensure light door sliding with ease
